

an evaporation chamber exposed to a second pressure lower than said first pressure, said evaporation chamber partially surrounded by an output surface of said filter;

means for expanding an evaporative surface area of said evaporation chamber over that of a substantially flat surface; and

an outlet in communication with said evaporation chamber and positioned in a base of said housing.

22. An efficient fluid cleaning system comprising:

first means for removing solid mater from said fluid and

second means for facilitating vaporizing certain liquids and/or gases in said fluid by squirting said fluid in an evaporation chamber to increase exposed surface area of said fluid in said evaporation chamber.
